

Q-Base Privacy Policy

Effective Date: June 11, 2026

Your privacy is extremely important to us. Q-Base maintains strict protocols to ensure your learning telemetry and personal information remain secure.

1. Data Collection & Storage

- **Local Storage:** Your personal study habits, custom collections, and application configurations are cached locally on your device using AES-256 encryption.
- **Cloud Storage:** Core data necessary for multi-device sync, including your peer connections and session records, are stored securely on our Appwrite cloud infrastructure. We implement rigorous access control to ensure data isolation.

2. End-to-End Encrypted Communications

- **Peer Study Rooms & Chat:** All direct messages, shared study collections, and session micro-updates between peers use End-to-End Encryption (E2EE). Q-Base servers only route the encrypted payloads and cannot decrypt your private discussions or shared materials.

3. AI Interactions

- **Generative AI Features:** AI requests processed through the Q-Base brain system rely on official Google Gemini and Groq APIs.
- **Data Protection:** No private friend data, conversational records, or PII (Personally Identifiable Information) are shared with third-party advertising algorithms or used to train external models without explicit consent.

4. Usage Telemetry

- We do not collect granular usage telemetry for advertising purposes. Limited diagnostic logs (crash reports) may be collected to improve application stability if you explicitly opt-in.

5. User Rights & Data Deletion

- You retain full control over your data. You may initiate a complete wipe of your local cache and remote cloud presence at any time via the Settings menu (â€œReset Application Dataâ€). This action is irreversible and permanently purges your account records from our Appwrite instances.
